

VxCloud DR & Backup

VxCloud DR & Backup service is a simple and cost-effective backup-as-a-service solution that extends tried-and-trusted tools on-premises with rich and powerful tools in the cloud. It delivers protection for a client's data no matter where it resides: in the enterprise data centre, in remote and branch offices, or in the public cloud; while being sensitive to the unique requirements these scenarios pose. Azure Backup, now in a seamless portal experience with Azure Site Recovery, offers minimal maintenance and cost-efficiency, consistent tools for offsite backups and operational recovery, and unified application availability and data protection.

VxCloud as a Managed Backup Service (MBS) is built from the multiple best of breed technologies that is designed to meet the needs of small, medium and large enterprise IT departments, providing reliable backup with central management and monitoring. VxCloud Managed Backup is integrated with Amazon Web Services, Microsoft Azure and Google Cloud Platform.

VxCloud Managed Backup any IT service company can have the benefit of robust and reliable cloud backup service with remote management and monitoring.

VxCloud Managed Backup Service is also a good fit for internal use by businesses of all sizes as it allows to manage and monitor cloud backup client across multiple machines, control billing and licenses from one web-based control panel.

VxCloud knows the importance of creating a backup and process to get the correct system and solutions data. VxCloud recovery process is driven by a number of solutions that are used to restore the client IT services as fast as possible. VxCloud recovery and DR as a Services is based on Microsoft Azure and hosted servers where the data is replicated and can be recovered as and client requires.

Your environment can be protected by automating the replication of the virtual machines based on policies that are set by VxCloud. VxCloud site recovery can protect Hyper-V, VMware and physical servers and we will use Azure or the hosted Teraco Data Centre as the proposed recovery site. VxCloud Azure Site Recovery services coordinates and manages the ongoing replication of data.

Each Backup and DR services is subject to a detailed design and the client requirements for the recovery of IT services. We facilitate the workshops to resolve the client's business drivers.
