

## VxCloud Azure and AWS Public Cloud

VxCloud AWS and Azure MSPs (Managed Service Provider) is differentiated by building a practice around DevOps, automation, and cloud-native application design. The best AWS and Azure features are used while designing solutions such as IaaS, PaaS, or SaaS offerings in order to meet customers demanding unique business requirements.

We have started with the network integration level first to support the SD-WAN services integrated with Azure and AWS and can now act as a one-stop shop for customers by providing a common support, provisioning, and billing experience all with a flexible CSP licensing business models.

VxCloud has transitioned into a modern AWS and Azure MSP partner. Modern partners focus on differentiation, highly optimized operations support and customer life cycle value management.

## VxCloud AWS and Azure MSP Services Includes:

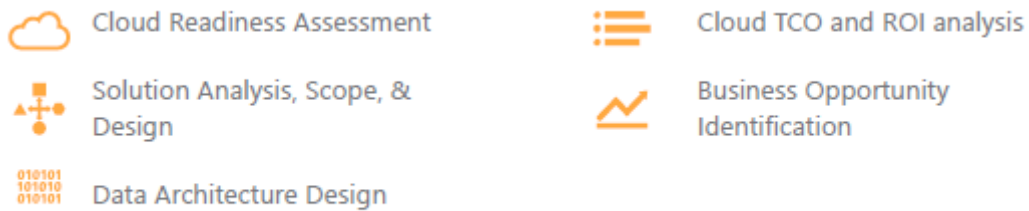

### Planning

Assess the customer's IT environment and determine the networking, virtualisation, data and applications that are viable opportunities for AWS and Azure migration

Create an AWS and Azure roadmap for customer adoption and the associated value

Provide the customers with TCO and ROI analysis for moving their applications to AWS and Azure

Create the networking requirements design as per the VxCloud SD-WAN integration for AWS and Azure VPN Gateway

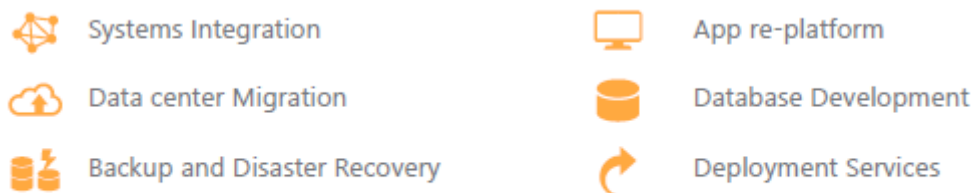

### Enablement

Migrate viable workloads to AWS and Azure

Assist the client and developers in re-platforming applications to run in AWS and Azure

Assist with the design of hybrid and public cloud workloads

Perform client testing and validation of data and applications before it is moved to AWS and Azure

## Operations

Operational support includes the monitoring of applications and workloads on AWS and AZURE

Connect SLA service to AWS and Azure Public Cloud including our SD-WAN Network with AWS and Azure VPN

Provide clients with capacity planning, billing tracking and invoices as per the CSP (Cloud Service Provider) licensing agreements
