

## VxCloud Connectivity

VxCloud Network Connectivity services provide clients with point to point and MPLS connectivity. Connectivity solutions are based on MetroLAN and Metro Fibre solutions. Point to point connectivity can be provided as an MPLS Network or VPN Network. The latest networking services include Cloud VPN and SD-WAN. VxCloud as a Cloud Service Provider will include cloud based carrier integration with AWS and Microsoft Azure.

Connectivity is provided for branch offices to datacentres and/or head offices, via layer 2 and 3 networking protocols. Connectivity services usually include different support level SLA's as agreed upon with the client. We supports different connectivity solutions mostly based on Broadband, LTE and Metro Fibre interconnected links. The best use cases for VxCloud Connectivity includes high availability, data centre connectivity and central hosted application access.

NAPAfrica, Vodacom, Telkom, Liquid, Teraco, Seacom and DFA form part of the VxCloud Connectivity Solution.
